## INTRODUCTION

### BACKGROUND

The Army Manufacturing Methods and Technology (MMT) Program was established in 1964 as a part of the Army Production Base Support (PBS) Program. The MMT Program has goals of improving existing manufacturing technology, translating new technology into production line processes, and supporting the modernization and expansion of the military hardware production base. The program is governed by the provisions of AR 700-90, Chapter 3, which has been recently updated and submitted to the field in its draft form.

### COMPOSITION OF THE REPORT

This MMT Project Execution Report provides the status summaries of 473 active projects which have a total authorized cost of \$214,491,000. Total MMT program statistics, as well as the summaries of the active projects are also included. The report is compiled, edited, and published for HQ, DARCOM by the Manufacturing Technology Division of the Army Industrial Base Engineering Activity (IBEA) in accordance with AR 700-90, C1, paragraph 3-8e(1).

Distribution of this report is extended to Army materiel developers and users and to counterparts in the Navy and the Air Force. Inquiries on the detailed technical aspects of any individual project may be answered by the MMT Program representative of the action command under which the project was completed or is being executed. Inquiries or suggestions concerning this report or other facets of the MMT Program may also be directed to the Manufacturing Technology Division of IBEA.

The report is composed of three major sections:

- a. Projects Added 2nd Half, CY80 - A list divided by organization of all projects funded during the second half of CY80. Included is a narrative of the problem for each project.
- b. Projects Completed 2nd Half, CY80 - A list divided by organization of all projects completed during the second half of CY80. Included is a narrative of the final status for each project.
- c. Summary Project Status Report - These reports are divided by organization and include a summary of funding by fiscal year and a narrative status for each project.

## DISCUSSION

Manufacturing Methods and Technology (MMT) Projects and Efforts are major elements of the Army's Manufacturing Technology (MANTECH) Program. AR 700-90 succinctly describes the MANTECH objective as the improvement of the industrial readiness and efficiency of the production base for Army materiel. Further defined objectives are stated in the Statement of Principles for the DOD Manufacturing Technology Program. This Statement, originating at the Deputy Under Secretary of Defense level, not only establishes ground rules for the Program but highlights the level of emphasis that the Program receives.

To attain the objectives described in the Statement of Principles, the Army funds discrete work units, called Projects, on a yearly basis. These projects, identified by a seven-digit number, contain work requests, which upon completion will result in an end product whose technical transfer can be effected. At times, in order to have a total work package which is implementable, (i.e., which can achieve the payback for which the work was funded) the scope can be of such a magnitude that total funding in one fiscal year can be an inefficient use of resources. In this event, the total work might be multi-year funded, (i.e., be more than one project, each having a technically transferrable end product). These total implementable work units are called "Efforts". These Efforts can consist of many projects or just be one project, depending on the amount of work required to achieve the implementable technical goal. Efforts are identified by a four-digit number which is the same as the last four digits of a project or projects which make up the effort.

The following three charts (Figures 1-3) summarize MMT project reporting and funding status for the 2nd Half of CY80. These summaries include data from the Major Army subcommands (SUBMACOM) that have active projects and the AMMRC and DARCOM sponsored projects. Cumulative figures pertaining to project distribution and expenditures of funds on contract and in-house are provided. Completed projects are not included in this section. They are listed in a separate section on page 27 which gives a final work status for each project that was completed during this reporting period.

A summary of the MMT program (Figure 1) indicates that the number of active projects has decreased by 27% in comparison with the 2nd half of CY79. The comparison is made between parallel reporting periods (2nd half, CY79 and 2nd half, CY80) in order to observe the project number and funding changes that occur within each command and within the total program. The data on this chart shows projects that were active for the period July through December 1980. It can be noted that there was a decrease in number of projects and authorized funds within every command except AMMRC/DARCOM/DESCOM. This decrease reflects a decline in funding levels and points out continuing success in the close-out of old projects. Another cause for the decrease was

the late funding of the FY81 program. Many of the newly added projects were not funded until after December 1980 whereas during the previous year (2nd half CY79) much of the new program had been funded

A breakout of the active projects by fiscal years is shown in Figure 2. An increased emphasis has been placed during the past year on closing out older projects. The success of this close-out is shown by comparing the fiscal years 73-7T of the 2nd half CY79 with the current

period. A year ago there were 67 active projects for these fiscal years. There were only 18 active projects (73-7T) during the 2nd half CY80. The total span of the active MMT program is now seven years.

Also, there was a total of 118 projects completed overall during the current reporting period. This is the largest number of projects completed during a six-month period within the last two years. Figure 3

indicates at what rate the project funds are being expended. The percent of in-house expenditures has increased by 11% from the 2nd

half CY79 and the percent of contract expenditures has remained about the same. This would seem to indicate that in-house funds are being expended at a greater rate than in the past. While this is true to a degree, other factors have also resulted in this apparent program improvement. As stated earlier, the late funding of the new FY81 program caused a decrease in funding level through December 1980. This explains part of the significant difference between in-house funds from the 2nd half CY79 (\$165.3 million) and the 2nd half CY80 (\$98.3 million). The 2nd half CY79 period which included more new projects, would thus have more funds remaining in-house. This then would result in a smaller expenditure rate than the current period.

Accuracy of project information depends on the quality of the project status reports submitted to IBEA from the commands. Efforts were again made this period to improve the quality of individual reports. Any report containing significant errors or inadequate description of accomplishments was sent back to the command for correction.

Accuracy also depends on a complete submission of all the project status reports for each command. In December, a call letter was mailed out to each SUBMACOM. Inclosed with this letter was a computerized listing of the projects for which a status report was required for this reporting period. There were 30 reports, which five weeks after the due date, were not submitted. This is reduction of eight reports compared to the last report period. This is significant because the cutoff date was moved up a week and yet the number of delinquent status reports was reduced. The following list shows the number of delinquent reports within each command.

This delinquency creates a void in the information presented in the compiled report. Continuing improvement in this area will insure a more useful review of the progression of the MMT Program.

PULTRUSION OF HONEYCOMB SANDWICH STRUCTURES

FABRICATION OF HONEYCOMB SANDWICH PANELS IS LABOR INTENSIVE AND FACE-TO-CORE BONDING OFTEN TAKES TWO CURE OPERATIONS. PULTRUSION CAN BE USED FOR CONTINUOUS PRODUCTION BUT COMMERCIAL PARAMETERS AND TOOLING ARE NOT SUITABLE FOR MILITARY USE.

1 81 7345

IN PROCESS CONTROL OF RESIN MATRIX CURE

CONVENTIONAL CONTROL OF THE CURE STAGE DURING COMPOSITE HARDWARE MANUFACTURING IS ATTAINED THROUGH MANUAL OR AUTOMATIC CONTROL OF THE AUTOCLAVE/PRESS TEMPERATURE AS A FUNCTION OF TIME. THIS METHOD IGNORES THE CHEMICAL STATE OF THE RESIN DURING CURE.

TWO CONCEPT DESIGNS FOR TREATMENT OF AL CHROMATING AND AL HARDCOAT ANODIZING OPS WASTE STREAMS. BOTH USE PRECIPITATION AS PRINCIPAL MEANS OF SEPARATION. ION-EXCHANGE USED WHEN HIGH PURITY H<sub>2</sub>O REQUIRED. FINAL REPORT PUBLISHED.

5 76 4114 F12  
POLLUTION CONTROL FOR SCAMP

PILOT LINE UTILIZING REVERSE OSOMSIS TESTED AT TWIN CITIES AAP ON ACTUAL SCAMP LINE WASTES. THIS TECHNIQUE EFFECTIVE IN CONCENTRATING OILY WASTES. MEMBRANE SUSCEPTIBLE TO FOULING AT TEMPERATURES ABOVE 100 DEG. F. FINAL REPORT PREPARED.

5 76 4114 F13  
MONITOR + CONTROL OF POLLUTANTS

ON SITE H<sub>2</sub>O QUALITY TESTING PERFORMED AT LA AAP. EQUIPMENT PROVIDES RAPID, SEMI-AUTOMATIC MEANS OF ANALYSIS OF H<sub>2</sub>O AT METAL PARTS PLANT. EVAL OF AIR MONITORING EQUIP CONDUCTED AT SCRANTON AAP. REGULAR MONITORING EQUIP CAN BE ADAPTED TO AAP PLANT USE.

5 76 4114 F14  
ELIM OF AIR POLLUTION FROM METAL PARTS MFG

EVAL CONDUCTED OF CHARGED DROPLET SCRUBBER AT SCRANTON AAP FORGE SHOP. PILOT UNIT INDICATES VERY GOOD REMOVAL EFFICIENCY. THIS PLUS SMOG HOG RECOMMENDED FOR SCRANTON AAP FORGE SHOP MCA PROJECT. NOT RECOMMENDED FOR OTHERS UNTIL THIS ONE INSTD/DEBUGGED

NO-X ABATEMENT METHODS

AFTER BENCH SCALE STUDIES, A SULFURIC ACID AND SELLITE SCRUBBING SYSTEM WAS DESIGNED AND INSTALLED FOR CONTROL OF NOX AND TNM FROM TNT MANUFACTURE. FINAL TESTING NOT COMPLETED BECAUSE TNT FACILITY AT RADFORD IS NOT IN OPERATION. SEE ALSO P33.

5 76 4114 P06  
PROPELLANT AND EXPLOSIVE WASTE INCINERATION

NEW FLUIDIZED BED INCINERATOR AND P AND E SLURRY FEED SYSTEM TESTED WITH INERT SIMULANTS AND DEBUGGED. PILOT PLANT EVALUATION, USING EXPLOSIVE, MADE. RESULTS EXCELLENT AND PROVED VIABILITY OF P AND E DISPOSAL THAT IS SAFE AND SUPERIOR TO OTHER SYSTEM

5 76 4114 P07  
ELIMINATION OF NITRATE WASTES

DEVELOPED DESIGN DATA FOR A BIOLOGICAL DENITRIFICATION SYSTEM. ALTHOUGH THE TECHNOLOGY WAS SUCCESSFUL, BOTH THE CAPITAL COSTS AND OPERATING COSTS ARE EXCESSIVE. AN ECONOMIC AND PERFORMANCE COMPARISON SHOULD BE MADE WITH OTHER PROCESSES.

5 76 4114 P08  
DISPOSAL OF RED WATER FROM TNT PURIFICATION

FIVE CONTINUOUS LONG DURATION PILOT SCALE MULTI-HEARTH FURNACE TESTS WERE PERFORMED AT NICHOLS ENGINEERING TO OBTAIN DATA FOR FY83 MCA PROJECT AT RAAP. TECHNOLOGY DEVELOPMENT EFFORTS ON SUNOCO SULFITE RECOVERY PROCESS WILL CONTINUE UNDER PROJ 5784225

5 76 4114 P10  
DISPOSAL OF WASTES FROM PROPELLANT MFG

STUDIES DEMONSTRATED THAT MEMBRANE TECHNOLOGY EQUIPMENT CAN EFFECTIVELY REMOVE AND SEPARATE COLLAGEN AND SODIUM SULPHATE FROM THE BALL POWDER MANUFACTURE WASTEWATER STREAM AND CONCENTRATE BOTH TO ACCEPTABLE LEVELS FOR POSSIBLE REUSE. TECH REPORT MADE

APPL. OF HIGH FREQ. INDUCTION HEATING FOR HOT COIL SPRINGS

A METHOD WAS DESIGNED AND DEVELOPED TO COIL SPRINGS BY HIGH FREQUENCY INDUCTION HEATING. THE XM-1 RECOIL SPRING AND SPRING NO.5172634 FOR THE M101-A1 WERE FABRICATED. THE PROJECT WAS COMPLETED.

6 79 7213

HIGH SPEED CHROME PLATING TECHNIQUE

PROJECT RESULTED IN A MORE SUITABLE APPROACH TO HIGH SPEED CHROME PLATING. A FULL LENGTH NON-CONFORMING ANODE IS USED. A TDP WAS PREPARED WHICH INCLUDES DESIGN OF EQUIPMENT, SPECIFICATION REQUIREMENTS AND PROCESS PROCEDURES. PROJECT IS COMPLETED.

6 77 7313

SIMULATOR FOR PRODUCTION TESTS OF WEAPONS- CAM

THIS PROJECT IS COMPLETE. A PASSIVE SIX-DEGREE-OF-FREEDOM SIMULATOR WAS SUCCESSFULLY DEVELOPED. THIS SIMULATOR PROVIDES DOD WITH A SOPHISTICATED, ECONOMICAL MEANS TO TEST THE INTERACTION BETWEEN WEAPONS, MOUNTS, AND THE SYSTEM.

6 77 7485

APPLICATION OF CHEMICAL PROCESSES TO IMPROVE SURFACE FINISH

105MM SPECIMENS WERE ELECTROPOLISHED USING THE CONFORMING ANODE. METAL REMOVAL WAS UNIFORM AND THE PROJECTED RATE OF REMOVAL AND SURFACE SMOOTHNESS WERE ACHIEVED.

6 75 7589

AUTO TARGETING SYS FOR PRODUCTION TEST OF AUTO WPNS + AMMO

THIS PROJECT IS COMPLETE. A NEW CONCEPT FOR AUTOMATICALLY SCORING SMALL CALIBER TARGETS WAS DEVELOPED. THE TARGETING SYSTEM WAS INSTALLED AND IS IN USE. THE TECHNICAL DATA PACKAGE DEVELOPED FOR THIS SYSTEM IS AVAILABLE.

### SUMMARY PROJECT STATUS REPORT

The Summary Project Status Report for each major Army subcommand (SUBMACOM) is preceded by the tabulated SUBMACOM MMT project funding status. The accuracy of funding amounts is based on the individual project status reports. The status as reported here is the IBEA condensation of information contained in the report or other comments as deemed useful. If a status report was not provided, a pertinent comment was made so that the project would be printed.

## PROJECT SLIPPAGE STUDY

The purpose of this study is to monitor trends in the timeliness of the MMT Project Execution. Figure 1 is a slippage profile for each command and for the program as a whole. An observation of this data shows that there has been very little change in the project slippage distribution when comparing the current period with the 2nd half CY79. The 5% increase in the "No Data" column is a reflection of the large number of projects which were approved late (i.e. after Nov) this fiscal year vs the number of projects approved late last fiscal year. Status reports are not required for projects just funded. Therefore, there is no scheduled completion date available for these projects causing them to fall into the "No Data" column. Also, 80 of these FY81 projects were not funded until after the 2nd CY80 reporting period (July-Decmeber 1980). Slippage data on these projects will not be available for another reporting period.

There are two problems that affect accurate project slippage reporting. One problem is delinquent status reports. If a status report is not submitted for a project, then the slippage will remain the same until the next status report is submitted. During the current reporting period there were 30 delinquent status reports. This is a decrease of eight reports from the previous period. A continued decrease in delinquency of project status reports will help improve the accuracy of the project slippage profile.

Another problem that affects accurate project slippage reporting is the basis on which final status reports are submitted. Some organizations await financial close-out before submitting final status reports. By doing this, several months might be added to the apparent duration of the project. The general policy has been that final status reports should be submitted when the technical work has been physically completed. If outstanding financial action does not hinder project implementation, then the time required for financial close-out is not meant to be added to an indicator which measures engineering achievement. Continued emphasis on using a consistent basis for project close-out, namely technical completion, will provide a more accurate accounting of the technical life of MMT projects.
